

Robotic Service Module

TREX TEKNOLOJİ

Robotic Service Module

Remote Access Service

Robotic Service Module is a remote access service that facilitates the repair and error diagnosis of your robots.

All problems in the Robot Software are detected and resolved.

Errors in the Robot Hardware (Gripper, Torch etc.) are quickly detected and directed to the Physical service for part change over.

Robotic Service Module

Real Time Software Service

Your robot is corrected remotely, in real time.

With an android tablet and a software included in the Service Module, visual and auditory communication with the operator is provided.

With instant communication, the root cause of the error is quickly revealed.

Hardware errors of Application-specific peripherals as Welding Gun, Spot Gun, Gripper, etc. are detected by visual inspection.

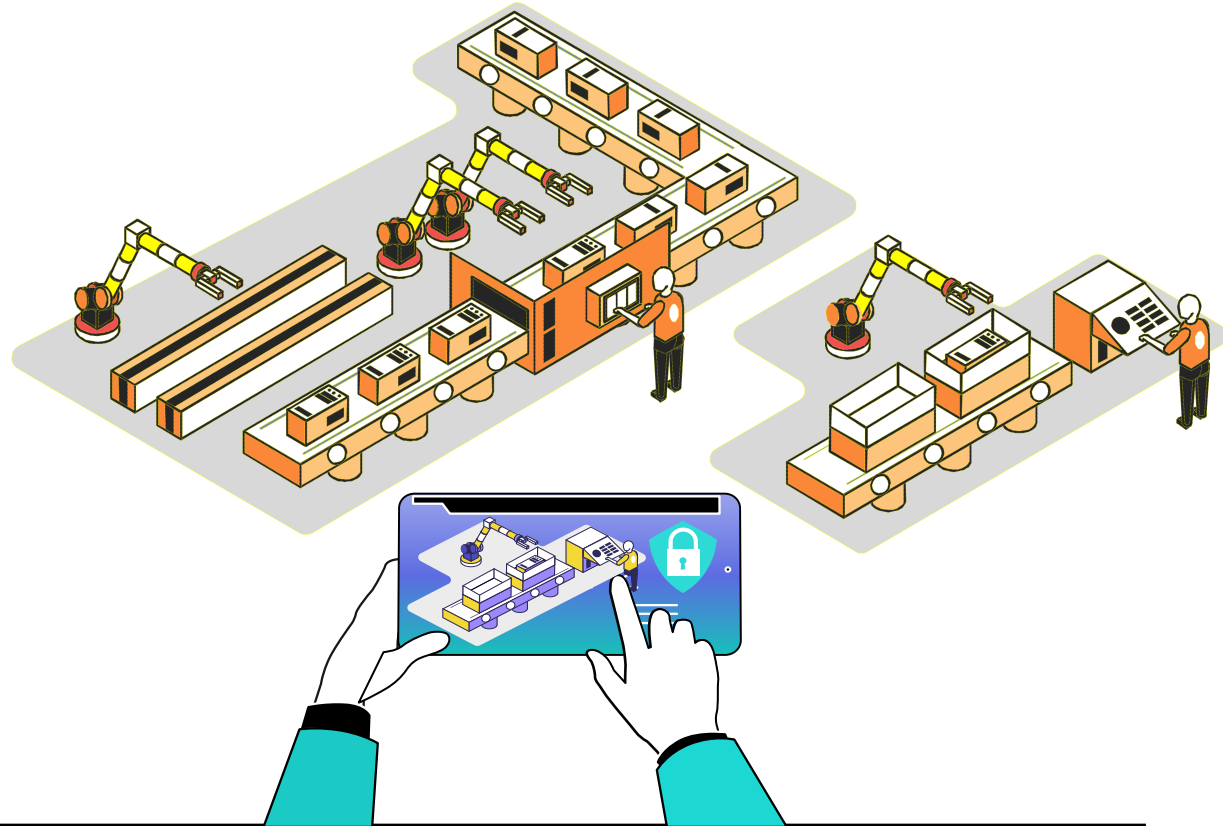

Robotic Service Module

Reduce Robot Downtime

Do not increase your Robot's downtime by waiting for physical service for software errors.

Reduce your Total Robot downtime and Overall Service costs.

Robotic Service Module

Instant Service all over the World

Instant software service is provided to the whole world.

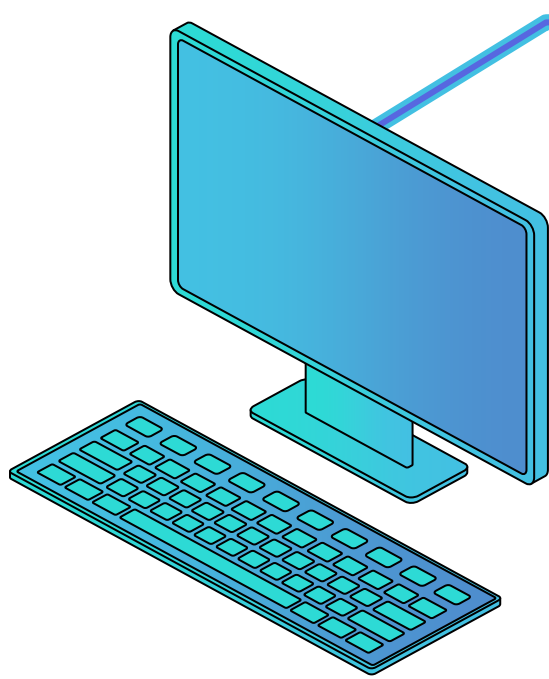

For hardware errors on-site «when needed service» is scheduled.

Onsite Service content;

- Robot Maintenance
- Parts replacement
- Program touch-up
- Education

Robotic Service Module

Software Solutions

- Alarm Analysis
- Signalization
- PLC Connection
- Program Logic

Hardware Error Analysis

- End of Arm Tool Inspection
- Welding Set Visual Inspection
- Pcb Verification

Security

- IEC62443-4-1 certificate
- Industry 4.0 certificate
- Security certificate

Equipments

- Android Tablet
- headphone

Contact Us

As Trex Teknoloji,
We aim to offer Efficient Technologies and
Sustainable Systems.

With our knowledge in Robotics & Automation,
We provide solutions with Innovative Technologies
in Industrial Applications.
